

SQL Data Analysis Project

DecodeLabs Project 3

Name: Sanusha Acharya

Objective : To analyze an e-commerce dataset using SQL and generate business insights through filtering, grouping, sorting, and aggregation.

Tools Used

- MySQL Workbench
- SQL
- Excel

Query 1: Total Orders

Purpose: Count the total number of orders in the dataset.

Query 2: Product Sales Analysis

Purpose: Find the most frequently ordered products.

Query 3: Orders by Payment Method

```
7 GROUP BY Product
8 ORDER BY Orders DESC;
9 SELECT PaymentMethod,
10 COUNT(*) AS Orders
11 FROM dataset2
12 GROUP BY PaymentMethod
13 ORDER BY Orders DESC;
```

PaymentMethod	Orders
Online	258
Cash	246
Credit Card	234
Debit Card	232
Gift Card	230

Purpose: Analyze customer payment preferences.

Query 4: Orders by Status

```
12 GROUP BY PaymentMethod
13 ORDER BY Orders DESC;
14 SELECT OrderStatus,
15 COUNT(*) AS Orders
16 FROM dataset2
17 GROUP BY OrderStatus
18 ORDER BY Orders DESC;
```

OrderStatus	Orders
Cancelled	250
Returned	247
Pending	237
Shipped	235
Delivered	231

Purpose: View the distribution of order statuses.

Query 5: Average Product Price

```
17 GROUP BY OrderStatus
18 ORDER BY Orders DESC;
19 SELECT Product,
20 ROUND(AVG(UnitPrice),2) AS Average_Price
21 FROM dataset2
22 GROUP BY Product
23 ORDER BY Average_Price DESC;
```

Product	Average_Price
Phone	375.22
Tablet	367.68
Monitor	358.66
Laptop	357.71
Chair	355.66
Printer	351.71
Desk	329.61

Purpose: Compare average prices across products.

Query 6: Total Quantity Sold by Product

```
22 GROUP BY Product
23 ORDER BY Average_Price DESC;
24 SELECT Product,
25 SUM(Quantity) AS Total_Quantity
26 FROM dataset2
27 GROUP BY Product
28 ORDER BY Total_Quantity DESC;
```

Product	Total_Quantity
Chair	562
Printer	542
Laptop	535
Desk	508
Tablet	497
Monitor	480
Phone	411

Purpose: Identify the products with the highest sales volume.

Query 7: Referral Source Analysis

```
27 GROUP BY Product
28 ORDER BY Total_Quantity DESC;
29 SELECT ReferralSource,
30 COUNT(*) AS Orders
31 FROM dataset2
32 GROUP BY ReferralSource
33 ORDER BY Orders DESC;
```

ReferralSource	Orders
Instagram	239
Email	230
Google	241
Facebook	228
Referral	222

Purpose: Determine which marketing/referral channels generate the most orders.

Query 8: Top 10 Most Expensive Orders

```
31 FROM dataset2
32 GROUP BY ReferralSource
33 ORDER BY Orders DESC;
34 SELECT *
35 FROM dataset2
36 ORDER BY UnitPrice DESC
37 LIMIT 10;
```

Purpose: Display the highest-priced orders in the dataset.

Conclusion : This project demonstrated the use of SQL for data extraction, filtering, grouping, and aggregation. Through SQL queries, meaningful business insights were generated from an e-commerce dataset.
